^a/ New plantings are approximate estimates based on ages of trees remaining in certain years. They are included to give the reader a picture of grower responses to current prices and other conditions.

^b/ Production for year shown is of that year's bloom and beginning of harvest. For example, the 1938 production would be that harvested from October, 1938 to March, 1939.

^c/ Includes amounts not harvested on account of market conditions--5,000 tons in 1932 and 1,500 tons in 1938.

^d/ The drop in bearing acreage from 1932 to 1933 is due to the freeze of that winter, which killed back bearing surface and placed about 4,000 acres back in the non-bearing acreage for 1933.
